

### AVAILABILITY AND USE OF NALOXONE IN SCHOOLS

<b>Superintendent Responsible:</b> Superintendent of Education: Human Resources	Initial Effective Date: 2019/11/25
Last Updated: 2019/11/25	Next Review Date: 2023/12/22

#### Purpose:

To establish emergency response procedures in the event that an individual experiences an opioid-related overdose on Grand Erie District School Board (Grand Erie) schools and facilities.

#### **Guiding Principles:**

Opioids are a class of psychoactive drugs that are often used for pain management. These include fentanyl, morphine, heroin, and oxycodone. While opioids are effective for pain relief, and many individuals can use them for short periods of time without concern, this class of drugs has contributed to many overdose deaths across Canada.

Grand Erie recognizes the potential need for the emergency administration of medication to a student or other individual who becomes ill, injured or unconscious as a result of an opioidrelated overdose while on school or facility property.

Grand Erie recognizes that, in the event that an emergency administration of medication is required, *the Good Samaritan Act (2017)* protects any individual who administers such medication by stipulating that such individual cannot be held liable for any harm or damage resulting from their actions, as long as they have acted in good faith in administering the medication.

#### 1.0 Procedures

- 1.1 School first responders in Grand Erie will administer naloxone in response to opioid overdose.
- 1.2 Grand Erie will ensure that each school has at least one naloxone kit available at all times. Administrator will immediately communicate the need for a replacement kit to the Division Manager of Operations and Health and Safety.
- 1.3 The Division Manager of Operations and Health and Safety will monitor expiry dates of all naloxone kits and replace them in a timely manner.
- 1.4 Each Administrator will ensure that all staff members are aware of the locations of naloxone kits within the school.
- 1.5 Each school and facility will have at least two employees trained in the administration of naloxone. Grand Erie will ensure that naloxone administration is a component of all first aid training.
- 1.6 Each school and facility will prominently display overdose-response materials, e.g., "S.O.S. Opioid Overdose" poster, "Be a Lifesaver" poster. In elementary schools, the office area would be an appropriate location, as would elementary washrooms. In secondary schools, appropriate locations would be the office area, washrooms, and guidance offices.
- 1.7 Administrators will ensure that each administration of naloxone is recorded. An OSBIE Incident Report will be used in situations where the victim is a student or visitor; an Employee Injury Report will be used where the victim is a Grand Erie employee.
- 1.8 Each Brantford/Brant County school will in conjunction with the Brant County Health Unit – maintain an effective means of distributing naloxone kits to students, employees, or parents/caregivers.

#### 2.0 Dispensing of Naloxone

- 2.1 Grand Erie employees will administer naloxone in the event of an opioid-related emergency on school and facility properties.
- 2.2 Grand Erie employees will not dispense naloxone kits proactively to students or employees, even if they are clients of the Haldimand Norfolk Health Unit or the Brant County Health Unit.
- 2.3 The Brant County Health Unit and the Haldimand Norfolk Health Unit may dispense naloxone kits proactively to students or staff on Board property.

#### 3.0 Signs and Symptoms of Opioid Overdose

- 3.1 The school's first responder will identify opioid overdose in the course of standard first aid assessment. The following are signs and symptoms of opioid overdose:
  - Unresponsive to stimuli (shake their shoulders and shout their name)
  - Slow or no breathing
  - Bluish lips and fingernails
  - Body is limp
  - Deep snoring or gurgling sounds
  - Vomiting
  - Pinpoint pupils

#### 4.0 Emergency Response

- 4.1 If the individual is unresponsive and/or experiencing any of the opioid-related overdose signs and symptoms, staff will:
  - Call 911 immediately
  - Access a naloxone kit from the nearest location
  - Administer naloxone
    - 1. Peel back the tab of the naloxone nasal spray container
    - 2. Place thumb on plunger and one finger on each side of the nasal applicator (do not press plunger/do not prime)
    - 3. Insert tip of nozzle into one nostril
    - 4. Support the victim's neck
    - 5. Press plunger into nostril
  - If the individual wakes up and/or breathing is restored, place the person into recovery position and stay with them until EMS arrives
  - If individual does not wake up and is not breathing, begin CPR
  - After 2-3 minutes, give the second dose of the naloxone Nasal Spray kit into the other nostril
  - If the individual wakes up and/or breathing is restored, place the person into recovery position and stay with them until EMS arrives
  - If individual does not wake up and isn't breathing, continue with CPR until EMS arrives
  - Once ambulance has arrived, staff will provide paramedics with a verbal report of care provided.
- 4.2 Post-Emergency
  - Staff will complete an OSBIE Incident Report (if the victim was a student or a visitor) or an Employee Injury Report (if the victim was a Grand Erie employee) and submit it to their manager
  - Principal or designate will immediately contact their supervisory officer
  - As soon as appropriate after experiencing an opioid-related incident, the principal will de-brief with staff, who should be made aware of available supports (e.g., EAP). The Principal should also consult with the Traumatic Events Response Team.

- Brant County Health Unit Memo of Understanding Naloxone
- Good Samaritan Act (2017)
- Employee Injury Report
- OSBIE Form

# **IN 5 STEPS** SHAKE at the shoulders SHOUT their name CALL 9-1-1 If unresponsive

### NALOXONE

- Give Naloxone at any time
- Insert tip of nozzle into one nostril and
- press the plunger firmly

## **BREATHING AND/OR** CHEST COMPRESSIONS

# IS IT WORKING?

If NO improvement after 2-3 minutes: - Administer a second dose of Naloxone Continue with chest compressions
