

PROCEDURE

FA-020

SCHOOL INITIATED FACILITIES UPDATES & CAPITAL PROJECTS DURING OCCUPIED TIMES	
Superintendent Responsible: Superintendent of Business & Treasurer	Initial Effective Date: 2013/05/27
Last Updated: 2021/05/31	Next Review Date: 2024/01/15

Purpose:

To provide guidance regarding all Grand Erie District School Board (Grand Erie) facility upgrades, including school-initiated upgrades, are completed in accordance with statutory authorities and do not compromise the health and safety of students and employees and do not change a school's "On the Ground" (OTG) capacity without proper approval.

Guiding Principles:

- 1.0 School initiated facility upgrades include all school buildings and grounds projects and all other facility upgrades, repairs or installations proposed by the Administrator, regardless of the source of funding that:
 - will affect any change in the use of a school room or area
 - create any physical changes to a school building or grounds
 - involve the installation of any equipment that will place an unusual load on the electrical, mechanical or other major building systems
 - will result in modifications to the Fire Code

- 2.0 All school-initiated facility upgrades shall be referred to Facility Services for review to ensure the following:
 - all health and safety statutes and regulations must be considered and addressed, including all issues relating to asbestos and other designated substances. Facility Services will involve the Grand Erie's Health and Safety Officer where required.
 - heating and ventilation upgrades must be considered and addressed to avoid indoor air quality (IAQ) issues resulting in health and safety risks.
 - fire, accessibility, asbestos and other code-related issues must be considered and addressed.
 - converting a room from instructional to non-instructional or vice-versa impacts on the "on the ground capacity" (OTG) tracked in the Ministry's School Facility Inventory System (SFIS) and must be approved by Executive Council.
 - all statutory requirements (e.g., Ontario Building Code, Electrical Safety Code, Fire Code, etc.) must be considered and addressed.
 - services such as plumbing and electrical capacity, etc. must be considered and addressed in the plan.
 - materials, equipment and procedural specifications must be employed to produce quality solutions that do not become a future financial liability for the Grand Erie.
 - All work will be completed by qualified Grand Erie employees or contractors. All approved projects will follow the appropriate procurement process as set out in Purchasing Policy and Procedure (BU-06 & BU-006) including the requirement that all contractors engaged be in good standing with the WSIB and have the required insurance coverage
 - A proper cost estimate of the work must be prepared that addresses all of the above issues.

- 3.0 Facility upgrades that will change the use of a room
- from unoccupied to occupied or vice-versa,
 - from instructional to non-instructional or vice versa or
 - in any other way changes the “On the Ground” (OTG) capacity, will follow the approval process outlined below:
- 3.1 The Administrator(s) shall forward a description of the proposed upgrade to the Planning Officer who will advise relevant employees of any impact on OTG the proposal may have.
- 3.2 The Administrator(s) shall complete an “Application for Change of Use Form” (Appendix A) and review the proposal with the Manager of Facility Services for viability. The application form shall include a description of the proposed upgrade along with the impact on the OTG of the school.
- 3.3 Following review by the Manager of Facility Services (signed acknowledgment No.7 on Application for Change of Use Form), the application package will be presented by the Administrator(s) to the Family of Schools Superintendent for approval (signed approval No.8 on Application for Change of Use Form). The Family of Schools Superintendent will forward applications they deem beneficial for the school community to Executive Council for review and consideration. The Administrator(s) will receive a debrief for applications that were not approved.
- 3.4 The Administrator(s) and the Manager of Facility Services will be notified of the Executive Council decision by the Superintendent of Business and Treasurer (signed acknowledgment No.9 on Application for Change of Use Form) and are responsible to ensure the requirements of Section 2 above are followed. The Administrator(s) will receive a debrief for applications that were not approved.
- 3.5 If the project changes the school OTG, the Grand Erie's Planning Officer shall update the school's OTG in the applicable databases, following the physical completion of the proposed project.

4.0 **Completing Capital Projects During Occupied Times**

Facility services may be required to carry out capital projects during the school year during occupied times. Listed below are a number of examples of the types of activities that could be considered capital work.

- Roofing – repair or replacement
- Paving & Sidewalk – repair or replacement
- Lighting upgrades – Internal and external
- Windows – replacement
- Masonry – Repair or replacement
- Additions/ Major Renovations

Construction/renovation activities can produce odours, dust and other environmental health concerns that may impact school environments. It is not always feasible or possible to plan construction and major renovation projects during non-occupied times.

Maintaining acceptable indoor air quality during a construction/renovation project is a collaborative effort amongst the general contractor, facilities services, school administration, as well as school employees. With some upfront planning and ongoing communications, safety and indoor air quality issues and complaints about construction work can be prevented or limited. The safety of students and employees is our priority and safety precautions will be taken during all activities.

5.0 Process

Prior to any work being carried out, Facility Services will review the proposed project and scope of work with the Administrator(s) to provide them with a full understanding of the project.

A Project Plan will be developed with the Administrator(s) as part of this process. (Appendix B)

Once it is determined that the project is going to proceed then a pre-bid site meeting will be held on site and a copy of the site-specific project plan will be shared with all potential bidders.

After the project has been awarded a Prestart Meeting shall be held with the successful bidder, the project manager from Grand Erie or consultants, and the Administrator. They will review the project plan and the items outlined on the plan, so everyone is clear prior to the start of the project.

The Administrator(s) will communicate with employees and advise them of the project and any impact to the school's operation. The Administrator(s) will issue a letter to parent(s)/caregiver(s) and school community advising them of the project and any impact relating to the school's operation. (Sample Letter Appendix C).

6.0 General Safety

At all times safety is paramount for school construction and renewal projects with special emphasis on students and employees and the general public for a project during the school year when the building is occupied.

Contractors will be required to provide full high wall perimeter fencing or barricades around their work and storage areas for all such projects. These must be locked and manned at all times.

All materials and equipment will be stored in enclosed areas and protected from access by the general public.

Materials may be hoisted onto the edge of a roof during the school day, but no materials will be hoisted over and across occupied areas.

When roof top ventilation equipment is moved for roof work the contractor will post a person inside the building to guard the interior area under the roof area affected.

All vehicular traffic will be coordinated so that at no time will any vehicles be moving on the premises during the recess periods, lunch periods and/or other times when activities are taking place on the school grounds.

Delivery and removal of construction project supplies, garbage bins and equipment will be outside school hours.

The contractor will supply portable toilet facilities for their employees.

Contractors and all persons having business on the work site must wear safety hats and boots as well as other safety equipment as required by the municipal, provincial and federal building and safety codes.

7.0 **Responsibilities**

7.1 **Facilities Services Construction**

- Provide notification to Family of Schools Superintendent of construction projects
- Communication liaison between Administrator(s), school employees and General Contractor
- Receive and forward listed MSDS and Designated Substance Survey to Health and Safety for review and comment
- Provide updates and advisories to Administrator(s) regarding changes to schedule, issues in-between bi-weekly meetings

7.2 **School Administrator**

- Attend mandatory Prestart Meeting and Biweekly site meetings
- Receive MSDS and make available to school employees
- Communicate with employees information from Preconstruction Meeting – scope of project, timelines, anticipated odours/dust, revised play area/entrance/exits (if affected), fire/emergency exit plans
- Communicate with School Council Chair, parent(s)/caregiver(s), and school community advising them of project in multiple modes (i.e., letter, newsletter insert, website, School Messenger, social media).
- Share project progress reports with employees and parent(s)/caregiver(s) based on bi-weekly and site meeting information
- Consider moving classrooms temporarily to another space when they are directly affected by work.
- Notify Facility Services & FOS Superintendent immediately if concerns arise

7.3 **General Contractor**

- Provide project MSDS for identified materials, at start of construction or minimum 2 weeks before the commencement of work
- Provide project schedule at start of construction
- Update schedule and provide 'two weeks look ahead' at each site meeting
- Take appropriate separation measures to limit impact of construction on existing school and occupants; follow fire separation guidelines. Ensure all areas affected by work are fenced off by appropriate construction fence (solid fencing 6 feet high)
- Ensure no overhead hoisting takes place during occupied times
- Ensure no vehicles shall move about the school property when children are outside
- Be responsible for administering OH&S on site for construction personnel and all visitors, including the proper use and storage of all construction materials and processes
- Include MSDS update in bi-weekly meeting minutes

8.0 **Health and Safety**

Past experience has shown that the three most common health concerns and questions arising from major renovations and construction involve the generation of dust and odours (more specifically painting and roofing) as well as the exposure to hazardous materials such as asbestos. The following information was developed to provide the administrator some background knowledge in anticipation that these concerns could arise. In most cases, sharing of this information will assist in alleviating any employees or parent(s)/caregiver(s) concerns, however, in some circumstances individuals with a particular sensitivity may still need to be temporarily accommodated.

Top Four Common Health and Safety Concerns Arising from Building Construction/Renovation

Dust

Construction and demolition work will create dust, a major component being masonry dust. Control of dust into the occupied area of the school is achieved by physical separation (plywood barrier and/or polyethylene sheeting), and by limiting foot traffic between construction areas and occupied building areas. Ventilation to the work area should be shut down and intakes and diffusers sealed when possible.

There may be a need to increase housekeeping activities in adjacent occupied areas. Consideration should also be given to boxing up non-essential materials.

Odours

It is inevitable that odours will be noticed by building occupants during the course of construction/renovation. Roofing and painting operations are particularly odoriferous. New furnishings, carpeting, millwork, sealers, adhesives, caulking, etc. will all emit low levels of volatile organic compounds during a period of off gassing.

It is possible to detect the odour of these chemicals, but the low levels will not result in health effects.

It is often perceived by building occupants that an unfamiliar odour constitutes a health hazard. If an odour is not expected or is undesirable, it is understandable that building occupants can become concerned, and complaints can arise. These complaints can be due to actual symptoms resulting from exposures or to a perceived risk of exposures to unknown materials, which may or may not be an actual health hazard.

Grand Erie specifies in all of our tenders that whenever possible water soluble/ latex based products be used during the course of construction/ renovation.

Noise

Noise will be more of a nuisance and interruption than a health and safety issue. For example, in a roof replacement project the noisiest operation is the removal of the old roof. In all projects the contractors will provide a schedule for the areas of the school that will receive work so that the impact on the students and employees can be minimized and the school may elect to make arrangements to move classes from one location to another in an effort to reduce the noise impact on the employees and student population.

Designated Substances (including Asbestos Containing Materials)

Ontario has regulations governing the exposure of workers to various substances; O. Reg 490/09 regulates designated substances in the workplace.

There are eleven designated substances, asbestos being the most common in our schools.

Before a construction project commences, the GEDSB is required to perform a detailed building survey for designated substances and provide this information to the general contractor. During the course of construction an abatement project to remove asbestos containing materials may be required. O. Reg. 278/05 prescribes the measures taken to safely remove asbestos containing materials. You will be notified of such a project and provided with any air sampling results when applicable.

9.0 Working Together for a Successful Project

Effective communication between the general contractor, facilities services, school administration, building occupants and other Grand Erie employees as appropriate is essential. Good communication will help foster a climate of trust and confidence and will bring all invested parties together to work toward solutions to problems as they occur.

Communication – Key Points

- Attend all design/construction meetings so that you have a thorough understanding of the scope of work. Understand what precautions will be taking place to control hazards such as those discussed above.
- Communicate the scope of work and precautions that will take place as well as any inconveniences that employees may encounter.
- MSDSs for relevant products should be available and accessible to all employees upon request.
- Provide regular updates to employees (employees meetings, e-mail, etc.). Depending on the scope of the project, frequency could vary. However, providing advance notice of activities known to generate odours or noise is highly recommended.
- Encourage employees to report concerns immediately to the identified designate and in turn promptly respond. If serious health concerns are reported, encourage employees to see a physician for assessment. Their symptoms may not be directly related to the construction activities but may indicate some other medical condition.

Scope of Work

Parking required

Staging and storage required

Fencing Required YES NO

Will Access be Modified? YES NO

Temporary Fire Plan Required YES NO

Use of Washrooms by workers YES NO

If yes, note location _____

Traffic Plan YES NO

DSR Required YES NO

Asbestos Plan Review YES NO

Permits or Notice of Project Required YES NO

Sample Template Letter to Parent(s)/Caregiver(s) for Roofing

Dear Families,

[Insert School Name] is scheduled to have a new roof installed beginning the week of [Insert date], weather pending. The projected time frame is approximately [Insert timeframe] to completion.

Although we will make every effort to minimize the disruption to student learning, students may have to periodically relocate classrooms.

[Insert transportation accommodation message, if applicable. For example: The renovations will also cause disruption to transportation. Busses will park in their same locations as the past. Students will walk along the outside of the fence as the inside will be a work zone and not accessible. Please leave walking room between the fence and your bus for the students to safely walk.]

Please be aware that the safety of employees and students is our priority and safety precautions have been established. [Insert details about equipment, access to school, areas to avoid. For example: The equipment will be set up along the front of the school and this will cause some changes for bus dismissal that will be outlined to the students. There will be arches erected over all entrances/exits to the school building and some areas will be cordoned off depending on which section of the school is the work zone.]

Some commonly asked questions are as follows:

1. I smell roof asphalt odours. Does this mean I am being overexposed to a chemical? NO. The sulfur compounds in roofing asphalt have very low odour thresholds. Smelling the odors does not indicate overexposure.
2. I smell roofing asphalt; my head aches; and I am feeling nauseated. Is this a short-term problem or can it result in chronic health problems? These can be short term or acute effects or exposure to roof asphalt odours. The symptoms should resolve within hours after exposure to the odour has stopped.
3. I have asthma, bronchitis and other lung problems. Can inhalation of roof asphalt odours aggravate my condition? While roof asphalt odors can irritate the respiratory tract and aggravate the condition of a person with asthma or other lung problems, this is normally not an issue for building occupants due to the lower levels of exposure as compared to the roof workers.

If at any time you have questions or concerns, please do not hesitate to contact me at [Insert phone number]. I will make every attempt to answer your questions or direct you to someone who may help.

Thank you for your patience during the renovation. We will make every effort to continue our school days and activities as planned.

Sincerely,

NAME
